

FOR IMMEDIATE RELEASE

MAGTEC TAKES NEXT MAJOR STEP IN PROVIDING UNPARALLELED SECURITY TECHNOLOGY FOR THE TRANSPORTATION INDUSTRY

MAGTEC and PeopleNet announce development partnership

Tuesday, July 10, 2007

Calgary, AB – MAGTEC Products, Inc. announces today they have entered into a development partnership with PeopleNet. MAGTEC's M5K will be integrated into PeopleNet's g3 onboard computing and mobile communications system to provide an essential breadth of fleet control.

MAGTEC's M5K is state-of-the-art technology providing enhanced security that focuses on driver safety and management, vehicle control, asset protection and cargo theft prevention. PeopleNet is a leading provider of onboard computing and mobile communications systems to the transportation industry. Through PeopleNet's g3 services, dispatchers will be able to communicate remotely with the M5K to alter driver authentication codes or idling times, receive tamper notification, or access MAGTEC's Acceleration Control System™ to remotely and safely slow a vehicle down to a point where it can be shut down completely. This means that, moving or not, carriers can now regain control of their vehicles in extreme, volatile or potentially costly situations.

"We have been excited about this partnership for some time and our development teams have experienced great results from the field testing that has already taken place," says Mark Ochitwa, vice president of MAGTEC Products, Inc. "In order to properly and securely manage a vehicle we need to make certain that our encrypted command protocol can be efficiently transmitted to and from our onboard device. One of our biggest efforts in any integration project is making sure that all communication is properly authenticated and highly encrypted."

Beta testing has now begun with four to six major carriers in North America who are existing PeopleNet customers and commercial availability is expected mid-August 2007.

"Partnering with MAGTEC opens many new doors for us," states Ron Konezny, chief operating officer for PeopleNet. "Our customers have been looking for something that will provide them the safety and security they need and now we can offer it to them. This is really only Phase I, we want to work together with MAGTEC on new product ideas and advancements that continue to add new safety features and technology to our products."

About MAGTEC

For more than 10 years MAGTEC has been a leader specializing in the development and manufacturing of innovative security technology focusing on vehicle control systems for the transportation and heavy equipment industries. MAGTEC's preventive-based technology and Fleet Control addresses challenges associated with driver management, safety, asset protection and prevention of cargo theft. MAGTEC specializes in product design and enhancement, certified installation and industry education. MAGTEC works with carriers, contractors, associations and government agencies.
