FBI INTELLIGENCE REPORT BY TOBACCO COMPANY RECOMMENDS MAGTEC

Report released as MAGTEC signs contract with EPES Transport Services

Monday, February 26, 2007

Henderson, NV – MAGTEC Products (USA), Inc. has been named in a recent FBI Intelligence report created by a tobacco company. According to the report, the FBI has indicated that thieves have said they cannot defeat the MAGTEC device and will avoid tractors outfitted with one. The report was sent to carriers hauling cigarette loads to provide them with information and details on how a load is stolen, along with suggestions for preventing cargo theft – one of them being, “consider installing the MAGTEC device.”

EPES Transport System, Inc., a highly regarded and influential carrier in the industry, and a tobacco carrier, is MAGTEC’s newest customer for their M5K. The state-of-the-art M5K, offers significant in-transit safety benefits along with unparalleled security for asset protection and prevention of cargo theft.

“EPES decided on MAGTEC because we felt that the security features were the best we could find on preventing an idle tractor from being stolen and also have the capability of shutting down a tractor at anytime from our driver management headquarters 24 hours a day 7 days a week,” states Britt Colley, president of EPES Transport System, Inc. “Our drivers feel with the MAGTEC added to our other security procedures they are the most protected drivers in the industry.”

EPES is the second major carrier in the U.S. for MAGTEC’s M5K. Celadon Trucking Services was the first. “Since implementing MAGTEC’s M5K on a portion of our fleet a year ago, we have increased the number of trucks equipped with it by 40%,” says Bruce Wishart, director of security for Celadon. “We plan to continue increasing the number of trucks with the M5K as it has proven effective in thwarting attempted cargo theft and helps our drivers feel much more secure, especially when hauling high-risk loads. It brings peace-of-mind to not only all of us at Celadon, but also our customers who have entrusted us with their cargo.”

“Our M5K technology is a product of fresh thinking and innovative design. Combined with over-the-air communication, the product’s many features include keyless driver authentication, remote driver code changes, unattended idle protection, and acceleration control technology,” says Robert Morisset, MAGTEC president and CEO. “A dispatcher can not only monitor a vehicle but also, if necessary, intervene by taking immediate control.”

About MAGTEC

For more than 10 years MAGTEC has been a leader specializing in the development and manufacturing of innovative security technology focusing on vehicle control systems for the transportation and heavy equipment industries. MAGTEC's preventive-based technology and Fleet Control addresses challenges associated with driver management, safety, asset protection and prevention of cargo theft.
